

# **COLE PEDERICK**

## **FULLY HYDRAULIC 5 IN 1 BIN**

### **NEW H.D 1000 SERIES**

#### **PRICE LIST**

**2018**

This model bin is completely hydraulically operated.

The top fold augers are hydraulically raised and lowered.

The motor is an ULP 32.2 or 35HP key start Kohler motor, manufactured in the USA. The augers are 8 inch diameter stainless steel, with an output of around 1 tonne per minute.

Bins have standard 2.7m long top fold augers which can be upgraded to 3.0m long or shortened to 2.4m long if required.

Auger length can be upgraded to 3.0m for an extra \$480.00 + GST per auger. The 2.4m augers have a credit of \$480.00 + GST per auger.

To calculate the outlet height, add your truck tray height to the following:

- 2.4m long auger = 2.1m above truck tray
  - 2.7m long auger = 2.3m above truck tray
  - 3.0m long auger = 2.5m above truck tray
- These heights are from the metal auger outlet.

NOTE: When ordering bin the Hobbs Hoist brackets protrude 150mm on the front and rear of bin, so the bin length may have to be altered slightly to fit to the truck tray length. We would require the exact truck tray measurements.

A hand held remote controller is supplied to operate the augers. it has a range of 20m from the truck.

The floor augers cannot be operated unless the discharge augers are operating to save possible damage.

Truck securing chains and turn buckles are supplied.

The bin is painted in 2 pac paint, has a roll tarp, sight glasses, four lights, marine grade fuel tank and lines and back-up manual hydraulics.
